

MedSpark Frontend / UX / UI Audit and Clone Specification

Audited product: [MedSpark](#)

Primary dashboard: <https://www.medspark.online/dashboard>

Audit date: 15 August 2026

Audit mode: Authenticated browser session, French-language interface, desktop viewport approximately 1280×720 , with direct route checks for public and authenticated screens.

This document describes the interface as observed, including exact visible copy where available, approximate measurements, responsive inferences, route behavior, and implementation notes. Personal account information visible during the audit is intentionally redacted.

Audit Scope and Access Notes

The corrected domain, `www.medspark.online`, was used because the originally supplied `medsparkdz.com` hostname did not resolve during the audit. The authenticated session exposed the dashboard, QCM, Studio, course-tracking, profile, and settings experiences. The login route redirected back to the authenticated dashboard, so the unauthenticated login and registration forms could not be inspected. Direct `/pricing` and `/revision` checks returned the site's branded 404 state. The dashboard's “Révision” tab is visible, but no separate revision route was discoverable from the accessible session.

Screen / route	Result	Observed state
<code>/</code>	Resolves to dashboard in the authenticated session	Authenticated dashboard content
<code>/dashboard</code>	Accessible	Full dashboard with profile, QCM, Studio, resources, credits, progress, and activity
<code>/qcm</code>	Accessible	QCM bank, session/exam entry points, sessions, ranking, and statistics
<code>/studio</code>	Accessible	Study notebooks area; Studio access reservation state
<code>/suivi-cours</code>	Accessible	Empty course-progress tracking state

/profile	Accessible	Profile header, friends area, QCM statistics, and activity
/settings	Accessible	Personal-information and password forms
/login	Redirects to /dashboard	Login form not observable because the session is already authenticated
/pricing	Branded 404	No pricing screen found at this route
/revision	Branded 404	No standalone revision screen found at this route

1. Layout and Structure

1.1 Global shell

The product uses a near-black application shell with a fixed-height top bar. The left side contains the MedSpark logo; the right side contains compact utility icons for language or localization, an application/navigation icon, notifications, theme switching, and the circular user avatar. On secondary screens, the shell usually adds a “Retour” or “Dashboard” control near the upper-left or upper-right area.

The desktop layout is centered inside a wide content container with approximately 32 px horizontal gutters. Dashboard content is arranged in a two-column grid: a larger primary column occupying roughly two-thirds of the width and a narrower right rail occupying roughly one-third. The profile card spans the primary column, while “Mes Amis” occupies the right rail. Below that, the primary column contains the tabbed product area; the right rail contains Spark Drive, Study With Me, and credit-related cards.

The page background is layered rather than flat. The shell is black or very dark charcoal, while major cards use deep navy, plum, brown, or purple-black surfaces. Large cards use saturated gradient bands or ambient glows to establish hierarchy. The overall visual language is a dark neon dashboard: warm orange and yellow accents for actions, pink and purple for active or premium states, turquoise/green for performance indicators, and blue for progress-related actions.

1.2 Dashboard structure

The dashboard begins with a profile summary card on the left and a friends card on the right. The profile card has a broad horizontal orange-to-pink-to-purple gradient banner across its top, with a large circular avatar overlapping the banner and body. The avatar is a dark circle with a white initial and a thin multicolor ring. The profile body shows the display name, handle, city, study stage, and three compact KPI cards for streak, score, and precision. A separate premium card on the right side of the profile card shows a crown, “Premium Actif,” the current track “Résidanat,” and “Accès illimité.”

The friends card is visually parallel to the profile card. It has a title row with a people icon, “Mes Amis,” and a purple “Ajouter” button. Its body is a dark empty-state panel. The observed empty copy is: “Vous n'avez pas encore d'amis. Utilisez la recherche pour en ajouter !”

The primary content area begins with a five-item segmented navigation row: “QCM,” “Studio,” “Ressources,” “Suivi,” and “Révision.” The selected item is a filled rounded pill, while inactive items are text and line-icon treatments. The tab row sits inside a colored content card whose background varies by active section. On the QCM tab, the card uses a brown/orange glow. On Studio, it uses a pink/plum glow.

The right rail contains a Spark Drive card with a large purple rounded-square icon, the title “Spark Drive,” subtitle “Ressources médicales,” and three benefit rows: “Drives officiels,” “Meilleures sources,” and “Tout en un seul endroit.” A primary “Ouvrir” control is present. A Study With Me card is marked “Bientôt disponible” and describes “Minuteur partagé,” “Chat en direct,” and “Jeux de pause.”

Below these cards, the dashboard includes an AI-credit card, a visual progress card, weekly activity, recent activity, and global progress. The credit card shows a total, daily and bonus breakdown, a “Recharger” control, a countdown to renewal at midnight, and separate remaining quotas for “Explications IA” and “Messages Chat.” The dashboard then shows “Progression Visuelle,” “Activité de la Semaine,” “Activité Récente,” and a global-progress summary across seven study years.

1.3 QCM route structure

The QCM page uses a single-column primary content flow with a smaller supporting panel on the right at desktop widths. Its hero area has a large gradient-backed title, “Banque de QCM,” followed by the subtitle: “Entraînez-vous avec des milliers de questions, participez aux simulations d'examens et suivez votre progression en temps réel.”

The hero provides four square action tiles: “Nouvelle Session,” “Nouvel examen,” “ECOS,” and “Résidanat.” Each tile has a colored icon block and a short label. The supporting right panel is “Bibliothèque de notes QCM.” It lists four benefits— “Des milliers de notes QCM,” “Pour chaque cours,” “Explorez vos notes créées,” and

“Exportez en PDF” —and ends with a full-width yellow/orange “Ouvrir la Bibliothèque” button.

Below the hero, the page is divided into “Sessions Partagées,” “Mes Sessions,” “Simulations d'Examens,” and “Classement.” The shared-session area is explicitly marked “Bientôt disponible !” The personal session area instructs the user to choose a unit or module, then exposes session groups including “RÉSIDANAT,” “DEUXIÈME ANNÉE,” “Unité Cardio-Respiratoire,” and “Unité Urinaire.” The ranking module includes the month label “août 2026,” a countdown-like “16 jours restants,” ranked users, session counts, precision percentages, points, and the current user’s position. The bottom of the observed page contains “Mes Statistiques” with Sessions, Questions, Correctes, and Précision.

1.4 Studio route structure

The Studio route uses a simpler centered layout. The header contains the logo, a theme toggle, and “Retour.” A horizontal internal navigation is centered near the top: “Mes Cahiers,” “Communauté,” “Collaborations,” and “Enregistrés.” The last three items are visibly locked or marked as administrator-reserved in the accessible account state.

The page heading is “Mes Cahiers,” with the sublabel “0/30 • Studio d'étude.” A top-right “Nouveau Cahier” control is disabled or access-gated. A full-width access banner says “Activez votre accès Studio” and “Réservez votre place pour accéder aux outils IA,” with a “Réserver ma place” button. The empty state uses a book illustration, “Aucun Cahier pour l'instant,” and “Créer mon premier Cahier.”

1.5 Course-tracking route

`/suivi-cours` is a compact page with a top-left “Dashboard” back button, a logo in the header, and a theme control. The heading row includes a blue trend icon, “Suivi des Cours,” and the subtitle “Suivez votre progression dans vos matières avec révision intelligente intégrée.” The upper-right controls are “Nouveau Suivi” and “Révisions.”

The main content is a large dark empty-state panel with a centered book icon, “Aucun suivi de cours,” supporting text, and a blue “Créer un suivi” button. The page is deliberately sparse when no tracking objects exist.

1.6 Profile route

The profile route reuses the dashboard’s profile header design almost exactly: gradient cover, overlapping initial avatar, name, handle, city, academic track, streak, score,

precision, and premium membership card. Below it, the friends card appears again with “Mes Amis,” “Ajouter,” and a privacy/visibility control shown as an eye-with-slash icon. The lower profile content exposes “Statistiques QCM,” including Questions, Classement, Streak actuel, Score moyen, and “Réponses correctes / incorrectes.” It also exposes “Sessions QCM” with Total des sessions, Sessions terminées, Examens blancs, and Session la plus longue. The final observed module is “Activité hebdomadaire,” with weekday labels and “Sessions cette semaine.”

1.7 Settings route

Settings uses a two-column form layout. The page header contains a gear icon, “Paramètres,” and the subtitle “Gérez les paramètres de votre compte et vos informations de sécurité.” The left card is “Informations personnelles,” with explanatory copy, email, name, faculty, academic year, and “Enregistrer les modifications.” The right card is “Changer le mot de passe,” with current password, new password, confirmation, helper text, and a separate “Changer le mot de passe” button.

The faculty selector is a combobox. The observed options include Alger, Annaba, Batna, Bechar, Bejaia, Blida, Constantine, Laghouat, Mostaganem, Oran, Ouargla, Setif, Sidi Bel Abbes, Tizi Ouzou, and Tlemcen. The academic-year selector includes Première Année through Sixième Année and Résidanat.

1.8 Responsive behavior

A mobile screenshot was not available in the accessible session, so the following are implementation inferences rather than direct observations. The two-column dashboard should collapse to one column below approximately 900 px, placing the right rail beneath the profile and primary activity content. The five-item tab navigation should either remain horizontally scrollable or compress into a two-row segmented control. Profile KPI cards should shrink to equal-width mini-cards; the premium panel should move below them. Settings’ two cards should stack vertically. QCM hero action tiles should wrap from four columns into two columns, then one column on very narrow screens. Header utility icons should remain visible while text labels are reduced or hidden.

2. Design System

2.1 Color system

The following palette is reconstructed from the rendered interface and the visual treatment of the captured screens. Exact token extraction was limited because most application colors

are generated through compiled styles and gradients rather than exposed as simple inline color attributes.

Role	Observed / implementation-ready value	Usage
Shell black	#060609 to #0B0B10	Global page background and top navigation
Card navy	#111B2D to #162238	Profile and dashboard information cards
Card charcoal	#15151C to #1B1A22	Empty states, settings cards, ranking panels
Plum surface	#260B22 to #3A0E2B	Studio active panel and pink ambient glow
Brown-orange surface	#32160A to #4A1E0A	QCM active panel and warm dashboard modules
Primary yellow-orange	#FFB000 to #FFB81A	Main CTA buttons, QCM active state, premium band
Warm orange	#FF7A00	Gradient start, highlight, icon accents
Pink	#F23E86 to #EF4D94	Studio active state and gradient accents
Purple	#8C45FF to #A247FF	Spark Drive icon, premium/secondary accents
Blue	#3B82F6	Course-tracking actions and progress-oriented controls
Turquoise	#18C6B5	Precision or success-adjacent KPI accent
Green	#39D98A	Active or positive indicators, logo detail
Primary text	#F4F2F8	Headings and high-emphasis labels
Secondary text	#9B99A8	Supporting descriptions and metadata
Muted text	#777482	Helper copy and disabled states
Border	rgba(255,255,255,0.08)	Card outlines and dividers

Warning	#F7A928 / warm yellow	Credit warning and countdown-related attention
Error	#B50000 or dark red	Error/404 family inferred from compiled asset clues; no form error was observed

The strongest recurring visual signature is the orange–pink–purple gradient used in the profile cover and the QCM hero title. The design also uses colored glows around active cards rather than relying only on borders.

2.2 Typography

The interface uses a rounded geometric sans-serif appearance. The exact family name was not exposed in the rendered text, but the letterforms strongly resemble a modern rounded UI family such as Nunito, Poppins, or a bundled equivalent. The logo is custom artwork or a logo image rather than ordinary text.

Text role	Approximate size	Weight	Treatment
Page hero title	48–56 px desktop	700–800	Gradient or white emphasis; very tight visual hierarchy
Main page heading	30–38 px	700–800	White, often paired with a colored icon
Card heading	20–24 px	700	White or near-white
KPI number	28–36 px	800	White, with colored supporting accent
Body copy	14–16 px	400–500	Gray-purple, generous line height
Button label	14–16 px	700	White or dark text depending on button background
Metadata / helper	12–14 px	400–500	Muted gray-purple
Badge / chip	11–13 px	700	Compact uppercase or title-case label

Line heights are approximately 1.15 for headings, 1.4–1.6 for body copy, and 1.0–1.2 for labels and buttons.

2.3 Spacing, radius, and elevation

The visual rhythm is based on a practical 4 px or 8 px scale. Common values are approximately 8 px for icon-to-label gaps, 12–16 px for internal card padding, 24 px for card-to-card spacing, and 32 px for outer container gutters. The main hero/profile cards use approximately 16–20 px corner radii. Buttons and segmented controls use pill radii, generally 999 px. Empty-state panels use 12–16 px radii.

Elevation is created more by translucent borders, backdrop darkness, and colored ambient glow than by traditional gray box shadows. Premium and active cards have a visible colored halo; ordinary cards use low-contrast borders and inner contrast. A clone should use layered box shadows such as a subtle black shadow plus a low-opacity accent-color glow for active or premium surfaces.

2.4 Iconography and imagery

Icons are small, line-oriented, and consistent with a Lucide-like library. The observed icon vocabulary includes users, user-plus, book, folder, chart, bell, moon, settings, crown, flame, target, eye-with-slash, lock, sparkles, graduation cap, clipboard, and trend-line icons. Icon containers are frequently rounded squares with gradient or saturated fills. The MedSpark logo is supplied as a light/dark PNG asset and includes a medical/science motif with “MedSpark” wordmark.

3. Component Catalogue

3.1 Buttons and actions

The primary button is a filled rounded pill, most often yellow-orange for high-value actions such as “Ouvrir la Bibliothèque,” “Nouvelle Session,” and “Recharger.” Secondary actions use purple/pink gradients, as in “Ajouter,” “Réserver ma place,” and active Studio navigation. Blue is used for course-tracking actions. Ghost actions appear as text or low-contrast outline controls, especially “Retour,” “Dashboard,” and utility navigation.

Buttons are typically medium-height, strongly rounded, and centered. They pair a left icon with a short French label. Disabled or gated controls retain the same visual footprint but reduce contrast and add lock or access-reservation language. The accessible state showed

“Nouveau Cahier” as gated and “Communauté,” “Collaborations,” and “Enregistrés” as locked.

3.2 Cards

Reusable cards include the profile summary card, premium membership card, friends card, QCM hero card, action tiles, Spark Drive card, Study With Me availability card, AI-credit card, progress card, weekly activity panel, recent activity empty state, ranking panel, statistics cards, Studio access banner, notebook empty state, and settings form cards.

Cards generally combine a dark surface, rounded corners, a compact title row, an icon, and one of three content modes: KPI/statistical, action-oriented, or empty-state. A clone should parameterize surface theme, glow color, heading icon, badge, CTA, and empty-state content rather than implementing each card independently.

3.3 Navigation

The top shell is global navigation. The dashboard’s five-item tab row is contextual navigation. The QCM page has a back control, and Studio has a four-item internal navigation row. The QCM page also exposes an inline “Simulations passées” link. Navigation active states are visually prominent: filled pill, gradient background, and brighter label/icon. Inactive states are muted gray-purple.

3.4 Forms

Settings demonstrates labeled form controls with a dark fill, rounded border, inline leading icons, and a right-side password visibility button. Email is displayed as a disabled or non-editable-looking field. Text fields have placeholder copy such as “Votre nom complet,” “Entrez votre mot de passe actuel,” “Entrez votre nouveau mot de passe,” and “Confirmez votre nouveau mot de passe.” Select controls use a combobox affordance with a chevron and a list of Algerian faculties or study years.

No validation error or success toast was observed. A rebuild should provide visible focus rings, inline validation, disabled submit states, and a success confirmation after save, but these should be treated as implementation requirements rather than observed behavior.

3.5 Badges, avatars, progress, and stats

The default avatar is a large circular initial avatar. Academic identity is shown as a yellow-orange pill reading “Résidanat.” Premium status is a card-level membership badge with a crown and “Premium Actif.” KPI cards use a large number, a compact uppercase label, a thin colored underline, and a decorative icon or glow.

Progress is represented through percentages, course counts, weekly day columns, and small metric cards rather than one dominant progress bar. The dashboard explicitly shows 0% Progression Globale , 0 Cours Terminés , and 0 Streak Cette Semaine in the observed account state.

3.6 Empty, loading, and availability states

The system uses clear French empty-state copy rather than blank space. Examples include “Aucun cours étudié récemment,” “Aucun Cahier pour l'instant,” “Aucun suivi de cours,” and “Vous n'avez pas encore d'amis.” Feature gating is communicated through “Bientôt disponible,” “Fonctionnalité à venir,” and “Activez votre accès Studio.” The QCM route briefly exposed “Chargement des simulations...” for the exam simulation module.

4. Key User Flows

4.1 Sign-in and sign-up

The direct /login route redirected to /dashboard because the browser session was already authenticated. Consequently, the actual sign-in form, password recovery, registration steps, account verification, and auth error states were not accessible. The route inventory found /login , /signup , and several authentication-related implementation endpoints in the compiled application, but those do not establish that their screens are publicly reachable.

A developer rebuilding the product should preserve the observed authenticated redirect behavior: successful sign-in should land on /dashboard , and existing sessions should not be shown the login form when directly opening /login .

4.2 Onboarding and account setup

No onboarding wizard was visible. The account already had a faculty of Alger, an academic year of Résidanat, and profile metadata. Settings provides the post-onboarding editing path for faculty and study year. The academic-year selector defines the default study path and explicitly tells the user that the choice can be changed at any time.

4.3 Dashboard experience

The user first sees identity and performance: profile, streak, score, precision, academic track, and premium entitlement. The second hierarchy is action: QCM, Studio, Resources,

Progress, and Revision. The third hierarchy is supporting utility: friends, resource drive, Study With Me, AI credits, weekly activity, recent activity, and global progress.

The dashboard is therefore both a home screen and a progress cockpit. A rebuild should preserve the first-screen priority of “what am I and how am I doing?” followed by “what can I study now?”

4.4 Starting a QCM session or exam

From the QCM page, the user chooses one of four prominent entry points: “Nouvelle Session,” “Nouvel examen,” “ECOS,” or “Résidanat.” The QCM page then organizes existing sessions by study year and unit/module. The observed data included Résidanat and Deuxième Année groupings, plus Cardio-Respiratoire and Urinaire units.

Question-by-question quiz layout, answer-selection states, timed progress, feedback, explanations, and result review were not reached during the audit because starting a new session would create or modify account activity. The dashboard copy and AI-credit card indicate that AI explanations are a product feature with a daily/bonus quota.

4.5 Course and content browsing

The content hierarchy is organized around seven study years: Première Année, Deuxième Année, Troisième Année, Quatrième Année, Cinquième Année, Sixième Année, and Résidanat. QCM sessions are further organized by units or modules. Studio organizes AI-assisted content into “Cahiers.” Spark Drive organizes medical resources around official drives and best sources.

4.6 Profile and settings

Profile is a read-oriented performance summary: identity, premium plan, friends, QCM statistics, ranking, session counts, accuracy, and weekly activity. Settings is the edit-oriented path for name, faculty, study year, and password. The two screens deliberately separate public/social profile context from private security and academic metadata.

4.7 Pricing and upgrade

No working pricing page was found at `/pricing`; the route returned a branded 404. The dashboard nonetheless exposes premium language: “Premium Actif,” “Résidanat,” and “Accès Illimité.” Studio exposes a reservation-style upgrade or waitlist action: “Activez votre accès Studio,” “Réservez votre place,” and “Réserver ma place.” AI credits expose “Recharger.” These are the observed monetization and entitlement entry points;

plan comparison and payment flow remain undocumented because they were not accessible.

5. Interactions and Micro-UX

The visible interaction language relies on strong active-state changes rather than complex motion. The selected dashboard tab changes to a filled warm gradient pill. The Studio tab changes to a saturated pink treatment. Cards use colored glows to communicate premium or active state. The theme control is represented by a moon icon, implying dark/light or theme switching. Utility icons are compact and positioned consistently in the top-right shell.

Feature availability is handled inline. Study With Me uses an explicit “Bientôt disponible” label instead of making the card appear broken. Studio access uses a reservation banner rather than silently disabling every action. Shared sessions are also marked as upcoming. Loading feedback is visible in the QCM simulation section through “Chargement des simulations...”

Gamification is a major visual layer. The product exposes streak, score, precision, ranking points, monthly leaderboard position, study-year progress, weekly activity, and daily/bonus AI credits. The premium card uses a crown motif, while the profile KPI cards use dedicated flame, medal, and target-like icons. The ranking includes numbered positions and user initials in circular avatars.

No hover animation, page transition, toast, modal, quiz feedback, or destructive-action confirmation was directly observed. A faithful clone should implement short 150–220 ms color, shadow, and transform transitions for buttons and cards, but should not invent large motion effects inconsistent with the restrained dashboard style.

6. Content and Information Architecture

6.2 Content organization

The information architecture combines three axes. The first is academic progression, represented by the seven study years. The second is learning mode, represented by QCM, Studio, Resources, Progress, and Revision. The third is social or motivational activity, represented by friends, shared sessions, ranking, streak, score, precision, and weekly activity.

The copy tone is direct, encouraging, and study-oriented. It uses imperative CTAs such as “Testez vos connaissances,” “Ouvrir,” “Créer mon premier Cahier,” “Créer un suivi,” “Ajouter,” and “Recharger.” Empty states are reassuring and action-oriented rather than technical. Feature-gated states use “Bientôt disponible” and “Activez votre accès” to turn unavailable functionality into future-oriented product messaging.

7. Screenshots and Capture Index

The browser session rendered annotated desktop captures for the dashboard, QCM, Studio, course tracking, profile, and settings screens. The capture system did not expose downloadable screenshot file paths in the audit environment, and the browser explicitly reported unavailable screenshots for the 404 pages. To preserve a reproducible visual checklist, the following index names each major screen and records the state that should be captured when rebuilding or validating the clone.

Capture ID	Screen / URL	State to reproduce	Key visual landmarks
S01	/dashboard	Authenticated dashboard, empty activity state	Gradient profile banner, KPI cards, premium card, friends card, five-tab navigation
S02	/dashboard → QCM tab	QCM tab selected	Warm brown/orange panel, “Banque de QCM,” Session and Exam tiles
S03	/dashboard → Studio tab	Studio tab selected	Plum/pink panel, “Studio d'étude,” Spark Drive right rail
S04	/qcm	QCM bank populated with ranking and session groups	Gradient hero, four action tiles, notes panel, leaderboard
S05	/studio	No notebooks and Studio reservation gate	“Mes Cahiers,” locked internal tabs, access banner, book empty state
S06	/suivi-cours	No course tracking objects	Large centered empty-state panel and blue “Créer un suivi” CTA
S07	/profile	Profile with QCM statistics	Gradient cover, avatar, premium card, friends, statistics modules
S08	/settings	Personal information and password forms	Two-column cards, dark inputs, faculty and year selectors

S09	/pricing	Branded 404	“404,” “This page could not be found,” footer and social links
S10	/revision	Branded 404	Same branded not-found treatment

For an implementation handoff, the developer should capture the listed screens at 1440 × 900 desktop, 1024 × 768 tablet, and 390 × 844 mobile widths. The most important responsive assertions are the dashboard rail collapse, tab wrapping or horizontal scrolling, stacked settings cards, and wrapped QCM action tiles.

Clone Build Specification

A faithful rebuild should use a dark-first design-token system with semantic surface colors, accent gradients, a rounded geometric font, and a reusable card framework. The global shell should be implemented once and parameterized for dashboard and secondary-page back controls. The dashboard should be data-driven: profile, premium entitlement, friends, credits, weekly activity, global progress, and recent activity should each be separate modules with explicit loading, empty, gated, and populated states.

The QCM page should be implemented as a dedicated information architecture rather than a dashboard modal. Its four entry tiles, notes library panel, sessions list, simulations module, leaderboard, and statistics should each be independently reusable. The Studio page should support a 0/30 notebook quota, reservation gating, internal locked tabs, and a notebook empty state. Course tracking should support creation, revision linkage, and an empty state. Settings should use accessible labels, keyboard-friendly comboboxes, password visibility controls, and explicit save feedback.

The French copy should be retained as the default locale. The product’s most important visual invariants are the almost-black shell, gradient cover and hero treatments, rounded cards, saturated icon containers, pill-shaped CTAs, large rounded headings, and compact metric cards with colored underlines. Avoid replacing these with a generic white SaaS dashboard: the personality of the product is specifically a neon-accented dark medical-learning cockpit.
